BOSQUE COUNTY, TEXAS, WITH REFERENCE OIL FIELDS AND OIL DEVELOPMENTS

# BOSQUE COUNTY IS GETTING "BIG PLAY" IN OIL DEVELOPME

Its formations have received approval of the most eminent oil geologists. A glance at the map shows Bosque County "setting pretty" about 35 miles southeast of the Duke pool, and about 15 miles northwest of the South Bosque pool; and between the Brownwood pool and the Corsicana pool. Somewhere between the great oil fields of Eastland, Brown and other counties to the west, the South Bosque and the Corsicana pools to the east and southeast will be the next great oil discovery in Texas. With more than 12 deep tests either drilling or contracted for in Bosque County, it is almost certain that this county will get the next "big excitement" at an early date.

### Bosque County Surrounded by Proven Fields.

Corsicana to the east of us has the oldest oil producing fields in Texas, and the South Bosque pool, with about 13 wells around 600 feet has been producing the highest grade oils for over 15 years. Draw a line from Ranger to South Bosque, and one from Corsicana To Brownwood, and these lines will cross near the center of Bosque county. The Sinclair-Gulf, the Texas Co., the Humble Co., the Empire Oil and Gas Co., in fact most of the big companies are grabbing up acreage in Bosque county. However, there are now many

# Coal and Oil Found in Shallow Water Wells.

Some of the water wells in the county have passed through stratas of coal, and others have passed some production of oil, at two depths, that is around 600 feet and around 1,100 feet; the latter strata, in the Sam Lewis well, the Lowe well and the Downing and Nowlin wells, all dug for water, developed considerable oil, in fact so much so as to destroy their value for water. The Weeks well now being drilled by Burt & Griffiths, has also struck this 1,100foot strata of oil, with fresh crude oil now covering the slush pit and other indications favorable.

## Wet Gas in Nearest Test to Reach the Sand.

The Rogers well by Benedum & Trees near the north line of the county, after entering the same Bend series of strata in which the Ranger oil is found, has encountered a wet gas, enough to produce fuel for the engine, and the Benedum & Trees interests, without drilling further, are buying up additional acreage in that section, and have closed contract for a well in Bosque county. The Sinclair-Gulf, Burt & Griffith, Constantin Refining Co., Ludlow & Thomas, and other big companies are drilling deep tests and contracts for Entrate Prop others are pending.

tracts not leased We invite those interested in oil development to visit Bosque County We have printed for distribution a nice map of the county correctly drawn, showing all surveys in the county, location of all wells, with blockage for same. Sent free upon request to any one, or the same can be obtained at leading brokerage offices, as well as from the news stands. Visitors can reach Bosque County from Fort Worth and Dallas and other points, spending the day here, and return on the afternoon trains-just a short ride and a nice day's outing by auto from all central points. Come and see what is being done. Many opportunities to get in on the ground floor now await sou.
